

Escale

Blade connecting set

Technical details

Country of Manufacture	 Germany
Manufacturer	Escale
Designer	Peter Kraus

Description

The Escale Blade connecting set accessory is used to connect two Blade lamps to each other and to mount them on a single power connection. Different sizes and surfaces can be combined as desired. The lamps are connected with a simple plug-in system. The 3-step connection system creates a slight height difference, allowing the lamps to be positioned overlapping. With several connecting sets, a large lighting object can be created from numerous individual lamps. A total of up to eight lamps can be connected together. One connecting set is required for each desired connection.
