Description

The Arturo Alvarez Cambo CM104 is a pendant lamp with a lamp shade made of lacquered stainless steel mesh. This lamp shade is connected to a structure made of beech wood. The lamp shade is offered in the colours white and black. It has a diameter of 24 cm. The beech wood structure is 45 cm high. The lamp has a maximum width of 26 cm. It has a maximum total height of 150 cm, its black cable can be shortened if necessary. The Cambo CM104 is operated with an integrated LED that has a colour temperature of 2,700 Kelvin extra warm white. The pendant lamp can be dimmed on site. A diffuser at the bottom of the lamp shade reduces the glare of the emitted light.

Cambo is the new pendant light that emerged from the collaboration of Arturo Alvarez with the design studio cenlitrosmetrocadrado. The word Cambo (of Galician origin) refers to a piece of wood with a hook at one end, an artisanal element in Galician tradition. Inspired by nature and the environment, cenlitrosmetrocadrado designed the Cambo system based on the natural growth of plants, the branching and ramification of trees. The vision of the two designers Ricardo Tubio and Xabier Rilo of the natural environment has led to a modular system that allows different designs to be configured with the same elements. Cambo is made of a beech wood structure with a water-based lacquer that allows the material to be shown in its most natural form. This special structure is combined with the lacquered stainless steel mesh of the lamp shade, which houses the integrated LED light source.
