Opis

The sensor for gesture control of the Knapstein KOSMA LED table lamp is located inside the light rod. The corresponding light source is switched on or off with a swiping hand movement in the sensor area. To dim the light, the hand is held in front of the respective sensor until the desired light intensity is reached. Thanks to the integrated memory function, the last settings are saved and are immediately available again the next time the light is switched on. With the Knapstein Dynamic White control, the light colour can be adjusted to a warmer tone (between the colour temperature 3,000 Kelvin warm white and 2,200 Kelvin extra warm white). The Knapstein KOSMA is available in several different surfaces.
